Personal Info

Lima, Perú

e-mail: katty.cuevas@gmail.com

Summary

I have almost a decade of experience in web development and possess advanced software engineering skills. I am also experienced in providing online courses and lessons on backend and frontend technologies. I am passionate about programming and can quickly learn and adapt to new technologies.

Furthermore, I am an active member of the tech community. I organize events at Ruby Peru, speak at various local and international events, and serve as a Women TechMakers ambassador and #IAmRemarkable facilitator to encourage women's participation in technology.

However, my top priority is being a parent. I enjoy spending time with my child and being there for their growth and development.

Experience

Shopify

Software Developer

MAY 2022 - MAY 2023

- Improve infrastructure, including deleting a table with millions of records and rewriting many existing queries and features on the installments payments team to use the sharding current implementation.
- Update the internal tool to audit transactions and fees between a partner and the company and search for mismatching data.
- Automate the integration of the adjustments sent by the partner to recalculate the transaction fees.

CloudForecast

Software Engineer

JUL 2021 - MAY 2022

- Setup and write the testing of the application
- Upgrade of the backend technologies: Ruby and Rails
- Rewrite all the application's front to apply a redesign of the business and contribute to the design in Figma using TailwindUI elements.

Able

Software Engineer & Backend Instructor

JUN 2018 - MAY 2021

- Contribute to the internal component library using React shared across projects.
- Document and build a BI dashboard using Amazon Quicksight to get insights about the success of a startup.

- Build a mental wellness mobile application from zero using React Native and Ruby on Rails for the API.
- Build a video streaming application for TV using React.
- Maintenance of the dashboard of the internal tool to provide better status of every project inside the company, also improving the company's financial reports.
- Test and build the API for a legal assistance app.
- Mentor apprentices and interns team members.
- Responsible for preparing, organizing, teaching, and guiding in the backend part of the Codeable Bootcamp.

Platzi

JAN 2017 - MARCH 2018

Back End Developer & Teacher

- Win an internal hackathon about new features in the platform
- Create a microservice using Django to implement the learning path feature
- Help to update the admin to feed the workshops landing pages for conferences
- Teacher of Ruby's essential course on the platform.

devAcademy

OCT 2013 - DEC 2016

Software Developer & Project Manager

- Technologies: Ruby on Rails, Electron, PostgreSQL, MySQL, SQL Server, and Heroku.
- Responsible for the e-learning platform at devAcademy, implementing or being part of most features.
- Responsible for many external projects, coordinating meetings with clients, and being tech lead and mentor to the other team members.
- Teacher of many courses such as Backend, Ruby, Rails, and MongoDB.
